

subCero is the sibling of the Cero chair, a 2003 Australian Design Award winning chair by Australian designer Brian Steendyk. Consisting of all the ingredients that has made cero an international success, the streamlined subCero has a playful elegance.

With its sculptural union between form and function the subCero is characterised by simple lines, comfort and strength. The stylish central void distributes forces applied to the seat throughout the circular form giving robustness in excess of conventional chairs with legs. And importantly for young children sharp edges have been eliminated and a unique ergonomically designed nibble in the top of the chair encourages good posture. Suited to domestic and commercial environments, subCero can be sat on from any side, and lifted easily to stow away at a moments notice. subCero is fabricated in UV resistant recyclable polyethylene plastic, making it adaptable to both internal as well as external environments.
